Pest Control

## Is Your Pest Prevention Program Keeping Up?

A strong commercial pest management program is built around prevention: identifying risks early, addressing conditions that contribute to pest activity, and staying alert to changes over time. Professional expertise, inspections, monitoring technology, exclusion, sanitation recommendations, trapping, targeted control methods, and ongoing evaluation all work together as part of an Integrated Pest Management approach.

Use this quick checklist to see where your facility stands and identify opportunities to strengthen prevention.

### 1 Early Detection & Monitoring

- ☐ Key areas are routinely monitored for pest activity.
- ☐ High-risk areas such as loading docks, storage spaces, utility areas, and food handling areas receive additional attention.
- ☐ Our team has a clear process for reporting pest sightings or conditions that could attract pests.
- ☐ Monitoring technology provides additional visibility where early detection is especially important.

### 2 Prevention & Facility Conditions

- ☐ Doors, windows, utility penetrations, and other potential entry points are regularly inspected.
- ☐ Moisture, sanitation, waste, and storage conditions are part of our prevention strategy.
- ☐ Pest activity is evaluated alongside facility conditions to help identify why problems may be occurring.
- ☐ Exclusion and other preventive improvements are recommended when vulnerabilities are found.

### 3 Data & Documentation

- ☐ Pest activity and service findings are clearly documented.
- ☐ We can identify recurring activity or trends over time.
- ☐ Our pest management provider uses this information to focus inspections and preventive recommendations.
- ☐ Service records and recommendations are easy for our team to access when needed for inspections, audits, or internal reviews.

## How Did Your Facility Check Out?

Unchecked boxes can help identify opportunities to strengthen your current pest prevention program. Consider asking your pest management partner:

- Where are we seeing recurring activity?
- Which areas could benefit from additional monitoring?
- Are we addressing conditions that may be contributing to pest activity?
- How is our pest management data being used to guide prevention?

## Stay Ahead With Turner

Turner Pest Control combines commercial expertise, Integrated Pest Management, monitoring technology, and clear reporting to help Florida businesses identify risks earlier and protect their operations. Schedule a free commercial inspection to identify potential pest risks and explore a prevention plan built around your facility.
